PETITION TO REVIVE UNDER 37 C.F.R. § 1.137(b)

Mail Stop PCT
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

April 5, 2005

Sir:

This is a Petition Under 37 C.F.R. § 1.137(b) to revive an abandoned application, namely, the National Stage of International Application No. PCT/US02/39316 as permitted by M.P.E.P. 1893.02. As set forth below, each provision of 37 C.F.R. § 1.137(b) is satisfied and therefore, the applicants respectfully request the granting of this petition.

(1) In particular, attached as Attachment A are the necessary documents to accept this application as a national stage entry of International Application No. PCT/US02/39316. In particular, filed herewith is a copy of Form PTO-1390 which is a transmittal letter to the United States Designated/Elected Office concerning the filing under 35 U.S.C. § 371 as well as a copy of the International Application. Furthermore, the necessary fees are also authorized in the

International Application No. CT/US02/39316
Petition to Revive Under 37 C.F.R. § 1.137(b)

transmittal letter for purposes of a § 371 entry. In addition, a copy of a declaration by the inventors is also attached. Accordingly, the necessary documents to accept this application as a national stage entry are satisfied.

(2) Furthermore, the petition fee as set forth in § 1.17(m) is provided with this petition.

(3) The entire delay in filing the required documents from the due date for the reply until the filing of a grantable petition pursuant to this paragraph was unintentional. In particular, the undersigned wishes to advise the U.S. Patent and Trademark Office that the due date for the national stage entry of this international application was June 21, 2004. On June 14, 2004, the applicants submitted the necessary transmittal letter under 35 U.S.C. § 371, the filing fee, an inventors' declaration, and a copy of the international application by express mail. However, the U.S. Patent and Trademark Office was not able to locate any information regarding this application and had no record of receiving it. On January 26, 2005, after contacting the U.S. PCT help desk in November and December of 2004, the applicants concluded that the documents must be lost and thereby proceeded to submit a Petition under 37 C.F.R. § 1.10 in order to have the U.S. Patent and Trademark Office recognize the filing of the documents submitted on June 14, 2004. However, in a Decision on Petition dated March 7, 2005, the U.S. Patent and Trademark Office decided that the provisions of 37 C.F.R. § 1.10(e) had not been fully satisfied in that the documents submitted on June 14, 2004, because the filed documents did not have the express mail label number on the documents. Therefore, the petition was denied. Upon this decision, the applicants immediately proceeded with contacting the undersigned and proceeded with this petition to revive the abandoned application as requested above. Copies of the original filing, including the Express Mail label with the U.S. Postal Service date stamp, as well as the

International Application No. PCT/US02/39316
Petition to Revive Under 37 C.F.R. § 1.137(b)

Petition under 37 C.F.R. § 1.10, as well as the Decision on Petition under 37 C.F.R. § 1.10(e) are set forth as Attachment B.

It is respectfully submitted that in view of this information, the abandonment of this application was unintentional and that the filing of this Petition to Revive is timely and that the "delay in filing the required reply from the due date for the reply until the filing of a grantable petition pursuant to this paragraph" was clearly unintentional.

4). Applicants believe that no Terminal Disclaimer is required pursuant to paragraph (b) of 37 C.F.R. § 1.137.

The undersigned and the applicants note that under the provisions under M.P.E.P. § 1893.02, the U.S. Patent and Trademark Office does recognize the revival of an International Application designating the United States if the requirements of 35 U.S.C. § 371(c) are not complied with by the time period set forth in 37 C.F.R. § 1.495(b) and (c). The application will be considered abandoned but that the applicants may file a Petition to Revive an abandoned application in accordance with the provisions of 37 C.F.R. § 1.137. The applicants submit that this is the present situation and therefore this petition would be a suitable petition for the current fact pattern.

By the filing of this Petition to Revive, the applicants do not admit that the originally filed National Stage Entry on June 14, 2004 was untimely, incomplete, improper, or deficient. However, in order to expedite and proceed with the prosecution of this application, the Petition to Revive was seen as the best means to resolve this matter in view of the disagreement that currently exists between the U.S. Patent and Trademark Office and the applicants.

Accordingly, in view of the information set forth above, as well as the documentation provided herein, the U.S. Patent and Trademark Office is respectfully requested to grant this

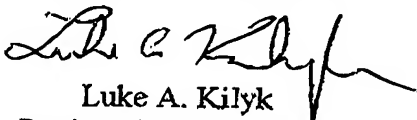

International Application No. PCT/US02/39316
Petition to Revive Under 37 C.F.R. § 1.137(b)

Petition to Revive the abandoned application.

CONCLUSION

If there are any fees due in connection with the filing of this Request for Reconsideration, please charge the fees to Deposit Account No. 50-0925. If a fee is required for an extension of time under 37 C.F.R. §1.136 not accounted for above, such extension is requested and should also be charged to our Deposit Account.

Respectfully submitted,

Luke A. Kilyk

APPLICANT(S) FOR DO/EO/US: Zixia FENG and Mark R. HELLBERG		

Applicant herewith submits to the United States Designated/Elected Office (DO/EO/US) the following items and other information:

- ☒ This is a **FIRST** submission of items concerning a filing under 35 U.S.C. 371.
- ☐ This is a **SECOND** or **SUBSEQUENT** submission of items concerning a filing under 35 U.S.C. 371.
- ☒ This is an express request to begin national examination procedures (35 U.S.C. 371 (f)). The submission must include items (5), (6), (9) and (21) indicated below.
- ☒ The US has been elected (Article 31).
- ☒ A copy of the International Application as filed (35 U.S.C. 371 (c)(2))
 - ☒ is attached hereto (required only if not communicated by the International Bureau).
 - ☐ has been communicated by the International Bureau.
 - ☐ is not required, as the application was filed in the United States Receiving Office (RO/US).
- ☒ An English language translation of the International Application as filed (35 U.S.C. 371 (c)(2)).
 - ☒ is attached hereto.
 - ☐ has been previously submitted under 35 U.S.C. 154(d)(4).
- ☒ Amendments to the claims of the International Application under PCT Article 34 (35 U.S.C. 371(c)(3))
 - ☐ are attached hereto (required only if not communicated by the International Bureau).
 - ☐ have been communicated by the International Bureau.
 - ☐ have not been made; however, the time limit for making such amendments has NOT expired.
 - ☒ have not been made and will not be made.
- ☐ An English language translation of the amendments to the claims under PCT Article 19 (35 U.S.C. 371(c)(3))
- ☒ An oath or declaration of the inventor(s) (35 U.S.C. 371(c)(4)).
- ☐ An English language translation of the annexes to the International Preliminary Examination Report under PCT Article 36 (35 U.S.C. 371(c)(5)).

Items 11 to 20 below concern document(s) or information included:

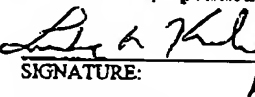

- ☐ An Information Disclosure Statement under 37 CFR 1.97 and 1.98.
- ☐ An assignment document for recording. A separate cover sheet in compliance with 37 CFR 3.28 and 3.31 is included.
- ☒ A preliminary amendment.
- ☐ An Application Data Sheet under 37 CFR 1.76
- ☐ A substitute specification.
- ☐ A power of attorney and/or address change letter.
- ☐ A computer-readable form of the sequence listing in accordance with PCT Rule 13ter.2 and 35 U.S.C. 1.821 - 1.825.
- ☐ A second copy of the published international application under 35 U.S.C. 154(d)(4).
- ☐ A second copy of the English language translation of the international application under 35 U.S.C. 154(d)(4).
- ☒ Other items or information:

**NOVEL BENZODIFURANIMIDAZOLINE AND BENZOFURANIMIDAZOLINE
DERIVATIVES AND THEIR USE FOR THE TREATMENT OF GLAUCOMA**

BACKGROUND OF THE INVENTION

1. Field of the Invention

The present invention relates to the field of glaucoma treatment and ocular neuroprotection. More particularly, the present invention provides novel compounds, compositions and methods for treating glaucoma, lowering intraocular pressure and providing neuroprotection.

2. Description of the Related Art

The disease state referred to as glaucoma is characterized by a permanent loss of visual function due to irreversible damage to the optic nerve. The several morphologically or functionally distinct types of glaucoma are typically characterized by elevated IOP, which is considered to be causally related to the pathological course of the disease. Ocular hypertension is a condition wherein intraocular pressure is elevated but no apparent loss of visual function has occurred; such patients are considered to be at high risk for the eventual development of the visual loss associated with glaucoma. Some patients with glaucomatous field loss have relatively low intraocular pressures. These so called normal tension or low tension glaucoma patients can also benefit from agents that lower and control IOP. If glaucoma or ocular hypertension is detected early and treated promptly with medications that effectively reduce elevated intraocular pressure, loss of visual function or its progressive deterioration can generally be ameliorated. Drug therapies that have proven to be effective for the reduction of intraocular pressure include both agents that decrease aqueous humor production and agents that increase the outflow facility.

WO 03/

PCT/US02/39316

Such therapies are in general administered by one of two possible routes, topically (direct application to the eye) or orally.

There are some individuals who do not respond well when treated with certain existing glaucoma therapies. There is, therefore, a need for other topical therapeutic agents that control IOP.

Serotonin (5-hydroxy tryptamine; 5HT) is an endogenous biogenic amine with a well defined neurotransmitter function in many tissues of the body including the eye [Zifa and Fillion 1992; Hoyer *et al.* 1994; Tobin *et al.* 1988].

5HT is known to interact with at least seven major 5HT receptors (5HT₁ - 5HT₇), and additional subtypes within these families, to initiate intracellular biochemical events such as stimulation of second messengers (e.g. cAMP, inositol trisphosphate) eventually leading to the final biological response, for example, tissue contraction or hormone release, etc. [Hoyer *et al.* 1994; Martin *et al.* 1998]. Receptor subtypes within the 5HT₁ family are negatively coupled to adenylyl cyclase (AC) and cause inhibition of cAMP production, while 5HT₄, 5HT₆, and 5HT₇ receptors are positively coupled to AC and thus stimulate cAMP production when activated by 5HT [Martin *et al.* 1998]. The receptors in the 5HT₂ family are positively coupled to phospholipase C (PLC) and thus generate inositol phosphates and mobilize intracellular calcium when activated to mediate the effects of 5HT. The 5HT₃ receptor is unique in that it couples to an ion channel which gates sodium, potassium, and calcium [Hoyer *et al.* 1994].

WO 03/01236

PCT/US02/39316

Known compounds exhibiting 5HT₂ agonist activity have typically been designed to treat numerous central nervous system (CNS)-related conditions, particularly the treatment of obesity and depression, by activation of 5-HT_{2C} receptors. Thus, one desired property of known 5HT₂ agonist compounds is that they easily penetrate the blood brain barrier. Compounds that readily penetrate the blood-brain-barrier by passive diffusion are generally lipophilic molecules, which do not contain polar functional groups that might impede this diffusion.

The utility of 5-HT₂ agonists for controlling IOP in the monkey model of glaucoma has been established (WO 00/16761). α_2 adrenoceptor agonists are also known for their use as IOP lowering agents. It is also known that compounds with 5-HT_{1A} agonist activity can be useful for the treatment of glaucomatous optic neuropathy (WO 0170223 A1). Until the present invention, no single compound possessing 5-HT_{2A} and/or 5-HT_{1A} agonist activity along with α_2 adrenoceptor agonist activity has been known.

15

To treat ocular diseases, it is desirable to administer topically compositions that will remain in the ocular tissues and not cross the blood brain barrier and enter the CNS. What are needed are anti-glaucoma drugs with both IOP lowering potency and ocular neuroprotective activity. It is also desirable that such compounds would not have a propensity to cross the blood brain barrier.

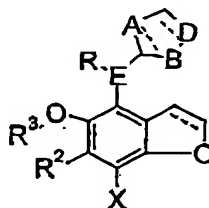

20

WO 03/

PCT/US02/39316

SUMMARY OF THE INVENTION

The present invention overcomes these and other drawbacks of the prior art by providing benzodifuran imidazoline derivatives and benzofuran imidazoline compounds for lowering IOP and providing neuroprotection. More specifically, the present invention provides compounds of the formula:

wherein A, B and D are independently chosen from either N or C, with the provision that at least one of A, B or D is N; E is C or N; R is H or C₁₋₄alkyl; R² and R³ are independently H, C₁₋₃ alkyl, C₂₋₃ alkenyl, or R² and R³ taken together can form a 5 or 6 member ring; X is hydrogen, halogen, C₁₋₄alkyl, or CF₃; and the dashed bond may be a single bond or a double bond; and pharmaceutically acceptable salts and solvates. Preferably the compound is 2-(8-bromo-benzo-[1,2-b;4,5-b']difuran-4-yl) imidazoline hydrochloride.

In another aspect, the present invention provides compositions containing the compounds described above. The compositions are most preferably in the form of topical ophthalmic formulations for delivery to the eye. The compounds of the invention may be combined with ophthalmologically acceptable preservatives, surfactants, viscosity enhancers, penetration enhancers, buffers, sodium chloride, and water to form an aqueous, sterile ophthalmic suspension or solution to form the compositions of the invention.

WO 03/06

PCT/US02/39316

The compositions of the invention are preferably formulated as topical ophthalmic suspensions or solutions, with a pH of about 5 to 8. The compounds of the invention as described above will normally be contained in these formulations in an amount .01% to 5% by weight, but preferably in an amount of 0.1% to 2% by weight. Thus, for topical presentation 1 to 2 drops of these formulations would be delivered to the surface of the eye 1 to 4 times per day according to the routine discretion of a skilled clinician.

The present invention further provides a method of lowering intraocular pressure and providing ocular neuroprotection in a mammal by administering to a patient in need thereof a therapeutically effective amount of a composition comprising a compound having the structure as described above. In preferred embodiments, the composition can be administered locally to the eye (e.g., topically, intracamerally, or via an implant).

DETAILED DESCRIPTION PREFERRED EMBODIMENTS

Unexpectedly, it has been found that serotonergic compounds which possess agonist activity at 5HT₂ receptors effectively lower and control elevated IOP and glaucoma. In addition, the compounds provide neuroprotective activity and are useful for treating persons suffering from ocular diseases associated with neuronal cell death.

It has been found that serotonergic compounds which possess agonist activity at 5-HT₂ receptors effectively lower and control normal and elevated IOP and are useful for treating glaucoma, see commonly owned co-pending application, PCT/US99/19888.

Compounds that act as agonists at 5-HT₂ receptors are known and have shown a variety of utilities, primarily for disorders or conditions associated with the central nervous

WO 03/00036

PCT/US02/39316

system (CNS). U.S. Patent 5,494,928 discloses certain 2-(indol-1-yl)-ethylamine derivatives that are 5-HT_{2C} agonists for the treatment of obsessive compulsive disorder and other CNS derived personality disorders. U.S. Patent 5,571,833 discloses tryptamine derivatives that are 5-HT₂ agonists for the treatment of portal hypertension and migraine.

5 U.S. Patent 5,874,477 discloses a method for treating malaria using 5-HT_{2A/2C} agonists. U.S. Patent 5,902,815 discloses the use of 5-HT_{2A} agonists to prevent adverse effects of NMDA receptor hypo-function. WO 98/31354A2 discloses 5-HT_{2B} agonists for the treatment of depression and other CNS conditions. Agonist response at the 5-HT_{2A} receptor is reported to be the primary activity responsible for hallucinogenic activity, with

10 some lesser involvement of the 5-HT_{2C} receptor possible (Fiorella *et al.* 1995).

Serotonergic 5-HT_{1A} agonists have been reported as being neuroprotective in animal models and many of these agents have been evaluated for the treatment of acute stroke among other indications. This class of compounds has been disclosed for the

15 treatment of glaucoma (lowering and controlling IOP), see *e.g.*, WO 98/18458 and EP 0771563A2. Osborne *et al.* teach that 8-hydroxydipropylaminotetralin (8-OH-DPAT) (a 5-HT_{1A} agonist) reduces IOP in rabbits (Osborne *et al.* 1996). Wang *et al.* disclose that 5-methylurapidil, an α_{1A} antagonist and 5-HT_{1A} agonist lowers IOP in the monkey, but due to its α_{1A} receptor activity (Wang *et al.* 1997; Wang *et al.* 1998). Also, 5-HT_{1A} antagonists

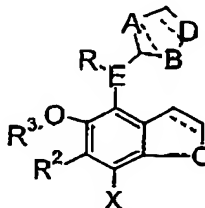

20 are disclosed as being useful for the treatment of glaucoma (elevated IOP) (*e.g.* WO 92/0338). Furthermore, DeSai *et al.* (WO 97/35579) and Macor *et al.* (U.S. 5,578,612) disclose the use of 5-HT₁ and 5-HT_{1-like} agonists for the treatment of glaucoma (elevated IOP). These anti-migraine compounds are 5-HT_{1B,D,E,F} agonists, *e.g.*, sumatriptan and naratriptan and related compounds.

WO 03/06

PCT/US02/39316

The present invention provides compounds possessing α_2 adrenoceptor agonist activity along with 5-HT_{2A} and 5-HT_{1A} activities having the general structure of Formula I.

Formula I

wherein A, B and D are independently chosen from ether N, C, with the provision that at least one of A, B or D is N; E is C or N; R is H, C₁₋₄alkyl; R² is H, C₁₋₃ alkyl, or C₂₋₃ alkenyl; R³ is H, C₁₋₃ alkyl, or C₂₋₃ alkenyl; or R² and R³ taken together can form a 5 or 6 member ring; X is chosen from hydrogen, halogen, C₁₋₄alkyl, CF₃; the dashed bond indicates that either a single bond or a double bond can exist at this bond location; and pharmaceutically acceptable salts and solvates. In preferred embodiments, the compound of the invention is 2-(8-bromo-benzo-[1,2-b;4,5-b']difuran-4-yl) imidazoline hydrochloride.

ES 323985 discusses that oxymetazoline is currently used for nasal de-congestion and in an ophthalmic solution to relieve redness of the eye. Although ES 323985 does discuss IOP lowering activity for oxymetazoline, it does not discuss the use of oxymetazoline for lowering IOP and ocular neuroprotection. Moreover, oxymetazoline is not a benzofuran as it lacks the furan substituent(s) and/or the ether substituent (Wang *et al.* 1993). Further, none of the claimed compounds are disclosed in ES 323985 or Wang.

WO 03/

PCT/US02/39316

It is recognized that compounds of Formula I can contain one or more chiral centers. This invention contemplates all enantiomers, diastereomers and, mixtures thereof.

In the above definitions, the total number of carbon atoms in a substituent group is indicated by the $C_{i,j}$ prefix where the numbers i and j define the number of carbon atoms; this definition includes straight chain, branched chain, and cyclic alkyl or (cyclic alkyl)alkyl groups.

It is important to recognize that a substituent may be present either singly or multiply when incorporated into the indicated structural unit. For example, the substituent halogen, which means fluorine, chlorine, bromine, or iodine, would indicate that the unit to which it is attached may be substituted with one or more halogen atoms, which may be the same or different.

The compounds of the invention can be administered systemically or locally to the eye (e.g., topically, intracamerally, or via an implant). The compounds are preferably incorporated into topical ophthalmic formulations for delivery to the eye. The compounds may be combined with ophthalmologically acceptable preservatives, surfactants, viscosity enhancers, penetration enhancers, buffers, sodium chloride, and water to form an aqueous, sterile ophthalmic suspension or solution. Ophthalmic solution formulations may be prepared by dissolving a compound in a physiologically acceptable isotonic aqueous buffer. Further, the ophthalmic solution may include an ophthalmologically acceptable surfactant to assist in dissolving the compound. Additionally, the ophthalmic solution may contain an agent to increase viscosity, such as, hydroxymethylcellulose,

WO 03/000006

PCT/US02/39316

hydroxyethylcellulose, hydroxypropylmethylcellulose, methylcellulose, polyvinylpyrrolidone, or the like, to improve the retention of the formulation in the conjunctival sac. Gelling agents can also be used, including, but not limited to, gellan and xanthan gum. In order to prepare sterile ophthalmic ointment formulations, the active ingredient is combined with a preservative in an appropriate vehicle, such as, mineral oil, liquid lanolin, or white petrolatum. Sterile ophthalmic gel formulations may be prepared by suspending the active ingredient in a hydrophilic base prepared from the combination of, for example, carbopol-940, or the like, according to the published formulations for analogous ophthalmic preparations; preservatives and tonicity agents can be incorporated.

10

The compounds of the invention are preferably formulated as topical ophthalmic suspensions or solutions, with a pH of about 5 to 8. The compounds will normally be contained in these formulations in an amount .01% to 5% by weight, but preferably in an amount of 0.1% to 2% by weight. Thus, for topical presentation 1 to 2 drops of these formulations would be delivered to the surface of the eye 1 to 4 times per day according to the routine discretion of a skilled clinician.

The compounds can also be used in combination with other IOP lowering agents, such as, but not limited to, β -blockers, prostaglandins, carbonic anhydrase inhibitors, and miotics. The compounds can also be used in combination with other agents useful for treating glaucoma, such as, but not limited to, calcium channel blockers and NMDA antagonists. These agents may be administered topically, but usually systemically.

WO 03/06

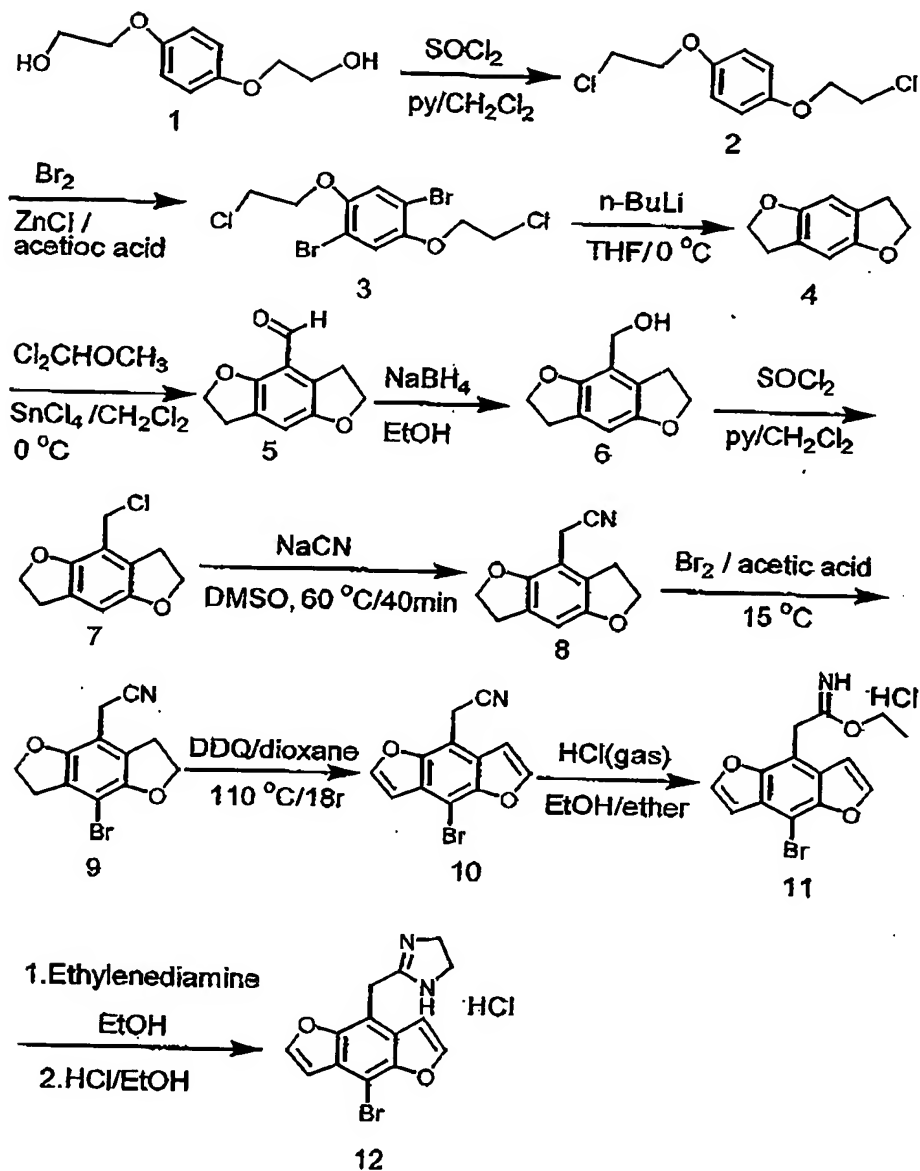

PCT/US02/39316

20° C yields compound 9. Reduction of the bis dihydrofuran with 2,3-dichloro-5,6-dicyano-1,4-benzoquinone (DDQ) in a solvent such as dioxane at temperatures between 80 to 130° C yields compound 10. Treatment of the nitrile 10 with hydrogen chloride gas in a solution of ethanol and ether provides the imino ester, 11. Cyclization of the imino ester with ethylenediamine in ethanol and conversion of the product to the hydrochloride salt using a solution of hydrogen chloride in ethanol yields imidazoline benzodifuran 12.

Scheme 1

WO 03 36

PCT/US02/39316

Example 2 2-(8-bromo-benzo-[1,2-b;4,5-b']difuran-4-yl) imidazoline hydrochloride

2-(8-Bromo-benzo-[1,2-b;4,5-b']difuran-4-yl) imidazoline hydrochloride was prepared by the multi-step procedure described below.

Step A: 1,4-Bis(2-chloroethoxy)benzene

Bis(2-hydroxyethyl)hydroquinone (50g, 0.25mol) was dissolved in 500ml of CH_2Cl_2 and cooled to 0°C , pyridine (48ml, 0.6mol) and thionyl chloride (41ml, 0.58ml) were added dropwise such that the temperature did not exceed 5°C . The mixture was allowed to warm to room temperature and was stirred over night. The solvent volume was reduced to 150ml. Aqueous 2N HCl (150ml) was added slowly and the layers were separated. The aqueous layer was extracted with CH_2Cl_2 (3x100ml). The combined organic layer was washed with 2N HCl (150ml), saturated NaCl solution (150ml), dried over anhydrous MgSO_4 , filtered and evaporated to a white solid. Recrystallization from ethanol afforded a white solid (73g). CIMS m/z 236 ($\text{M}+\text{H}$)⁺.

Step B: 1,4-Bis(2-chloroethoxy)-2,5-dibromobenzene

1,4-Bis(2-chloroethoxy)benzene (40g, 0.17mol) was suspended in acetic acid (400ml) and zinc chloride (56g, 0.41mol) was added. Bromine (57, 0.36mol) dissolved in acetic acid (80ml) was added dropwise to the suspension over 1.5h. The reaction was stirred at room temperature over night, during which time a precipitate formed. The solids were filtered, washed with acetic acid and ethanol and dried. A crystalline white product was obtained (45g). CIMS m/z 393 ($\text{M}+\text{H}$)⁺.

WO 03/0

PCT/US02/39316

Step C: 2,3,6,7-Tetrahydrobenzol[1,2-b;4,5-b']difuran

A solution of 1,4-Bis(2-chloroethoxy)-2,5-dibromobenzene (15g, 0.036mol) in dry THF (300ml) was cooled to 0 °C under nitrogen. A solution of 2.5 M n-butyl lithium in hexane (30ml, 0.075mol) was added through a syringe very quickly to the well stirred solution. The reaction mixture was stirred at 0 °C for 10 min, and the solvent was removed *in vacuo*. The residue was partitioned between ether (300ml) and water (200ml). The organic layer was washed with water (200 ml), dried over MgSO₄ and filtered. The solution was evaporated on a rotary evaporator until solids formed. The solids were filtered and dried to afford 4.3g of 2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran. CIMS *m/z* 163 (M+H)⁺.

Step D: 4-Formyl-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran

Tin(IV) chloride (11.7 ml, 0.1mol) was added through a syringe to a solution of 2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran (12.6 g, 0.078 mol) in 300 ml of dry CH₂Cl₂ at 0 °C under N₂, and the mixture was stirred for 5 min. Dichloromethyl methyl ether (7 ml, 0.078 mol) in 20 ml of CH₂Cl₂ was added into the mixture dropwise over a 10 min period. After the mixture was stirred for 30 min, the reaction was quenched by the addition of 100 ml of ice water. The aqueous layer was extracted with CH₂Cl₂ (2x100ml). The organic layers were combined and the resulting solution was washed with 3N HCl (3x150ml), H₂O (200 ml), and a saturated NaCl solution (200ml), dried over anhydrous MgSO₄, filtered and evaporated to a white solid. Recrystallization from CH₂Cl₂-hexane yielded 12.2 g of the product as a yellow solid. CIMS *m/z* 191 (M+H)⁺.

WO 03/05 136

PCT/US02/39316

Step E: 4-Hydroxymethyl-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran

A solution of NaBH₄ (2g, 0.053 mol) in 40 ml of 90% EtOH was added dropwise to a solution of 4-Formyl-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran (10 g, 0.053 mol) in 200 ml of EtOH. The solution was stirred at room temperature for 30 min and at 60° C for 10 min. After cooling to 0° C, 5 ml of 1N HCl was added and the solvent was evaporated. Ethyl acetate (80 ml) was added to the residue, and the resulting mixture was washed with H₂O (50 ml), saturated NaCl solution (50ml), dried over anhydrous MgSO₄, filtered and evaporated to a residue. Chromatography of the residue on silica gel, eluting with 30 % ethyl acetate in hexane, gave 7.5 g of 4-hydroxymethyl-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran as a white solid. CIMS *m/z* 193 (M+H)⁺.

Step F: 4-Chloromethyl-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran

Pyridine (4 ml, 0.05 mol) was added to a solution of 4-hydroxymethyl-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran (4 g, 0.021 mol) in 50 ml of CH₂Cl₂ and the mixture was cooled to 0 °C. Thionyl chloride (3.5 ml, 0.048 mol) was added dropwise. The resulting mixture was allowed to warm to room temperature and stirred for 6 h. After cooling, the mixture was washed with 1 N NaOH (2x50 ml), saturated NaCl solution (100ml), dried over anhydrous MgSO₄, filtered and evaporated to a residue. Chromatography of the residue on silica gel, eluting with 10 % ethyl acetate in hexane, gave 2.5 g of the product as a white solid. CIMS *m/z* 211 (M+H)⁺.

WO 03 86

PCT/US02/39316

Step G: 4-Acetonitrile-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran

4-Chloromethyl-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran (2 g, 0.01 mol) in 20 ml of DMSO was added dropwise to a solution of sodium cyanide (0.75 g, 0.015 mol) in 20 ml of DMSO at 70 °C. The mixture was stirred at 70 °C for 40 min. After cooling, 50 ml of ice-water was added. The precipitate formed was filtered, washed with water and dried giving white solid 8 (1.4g). CIMS m/z 202 (M+H)⁺.

Step H: 4-Acetonitrile-8-bromo-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran

10 Bromine (1.1 g, 0.007 mol) in 10 ml of acetic acid was added dropwise to a suspension of 4-acetonitrile-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran (1.4 g, 0.007 mol) in 20 ml of acetic acid at 15° C. The mixture was stirred at 15° C for 15 min. The precipitate formed was filtered, washed with acetic acid and ethanol and dried to yield 1.4 g of the product as a white solid. CIMS m/z 281 (M+H)⁺.

13

Step I: 4-Acetonitrile-8-bromo-[1,2-b;4,5-b']difuran

A solution of DDQ in 70 ml of dioxane was added dropwise to a solution of 4-acetonitrile-8-bromo-2,3,6,7-tetrahydrobenzol[1,2-b;4,5-b']difuran (1.4g, 0.005 mol) in 70 ml of dioxane. The mixture was stirred at reflux for 24 h. After cooling, the precipitate
20 that formed was filtered and washed with dioxane. The filtrate was evaporated to a residue, which was subjected to chromatography on silica gel, eluting with 10 % ethyl acetate in hexane, to yield 0.61 g of 10 as a white solid. CIMS m/z 277 (M+H)⁺, mp 169-170° C.

WO 03/00036

PCT/US02/39316

Step J: Ethyl (8-bromo-[1,2-b;4,5-b']difuran-4-yl)acetimidate**hydrochloride**

An excess of dry HCl gas was passed through a solution of 4-acetonitrile-8-bromo-[1,2-b;4,5-b']difuran (0.6 g, 0.0022 mol) in 50 ml of anhydrous ether and 3 ml of absolute ethanol at 0 °C. The resulting mixture was allowed to stirred at 0 °C for 1 h and at room temperature over night. The white solid formed was collected by filtration, washed with ether and dried to give white crystal of the product (0.6 g). ESMS m/z 323 (M+H)⁺, mp 239-240 °C (dec).

Step K: 2-(8-Bromo-benzo-[1,2-b;4,5-b']difuran-4-yl)imidazoline**hydrochloride**

A solution of ethylenediamine (0.8 ml, 0.012 mol) in absolute ethanol (5 ml) was added dropwise to a suspension of ethyl (8-bromo-[1,2-b;4,5-b']difuran-4-yl)acetimidate hydrochloride (0.54 g, 0.0015 mol) in absolute ethanol (50 ml) at 0° C. The resulting mixture was stirred at 0° C for 1 h and then refluxed for 20 min. The solvent was evaporated and the residue was dissolved in 20 ml of ethanol. A solution of 1N HCl in ether was added to the solution above to reach a pH of 3 and the mixture was stirred at room temperature overnight. The white solid that formed (0.4 g) was filtered, dried and recrystallized from MeOH/ether to afford the product (0.32 g). APCIMS m/z 320 (M+H)⁺, mp 264-265° C (dec). ¹H NMR (CDCl₃) □ 8.21-8.19 (s, 2H), 7.43 (s, 1H), 7.08 (s, 1H), 4.47 (s, 2H), 3.83 (s, 4H), 3.32 (s, 2H), ¹³C NMR (CDCl₃) □ 168.10 (C), 149.45 (C), 148.49 (C), 147.99 (CH), 147.63 (CH), 126.26 (C), 126.13 (C), 106.64 (CH), 106.53 (CH), 106.24 (C), 93.40 (C), 44.24 (CH₂), 24.15 (CH₂). Example 3 5-HT₂ Receptor Binding Assay

5 In order to determine the relative affinities of serotonergic compounds at the 5-HT₂ receptors, their ability to compete for the binding of the agonist radioligand [¹²⁵I]DOI to brain 5-HT₂ receptors is determined as described below with minor modification of the literature procedure (Johnson *et al.* 1987). Aliquots of post mortem rat cerebral cortex
10 homogenates (400 µl) dispersed in 50 mM TrisHCl buffer (pH 7.4) are incubated with [¹²⁵I]DOI (80 pM final) in the absence or presence of methiothepin (10 µM final) to define total and non-specific binding, respectively, in a total volume of 0.5 ml. The assay mixture is incubated for 1 hour at 23°C in polypropylene tubes and the assays terminated by rapid vacuum filtration over Whatman GF/B glass fiber filters previously soaked in
15 0.3% polyethyleneimine using ice-cold buffer. Test compounds (at different concentrations) are substituted for methiothepin. Filter-bound radioactivity is determined by scintillation spectrometry on a beta counter. The data are analyzed using a non-linear, iterative curve-fitting computer program (Bowen *et al.* 1995) to determine the compound affinity parameter. The concentration of the compound needed to inhibit the [¹²⁵I]DOI
20 binding by 50% of the maximum is termed the IC₅₀ or K_i value. Compounds are considered to possess high affinity for the 5-HT₂ receptor if their IC₅₀ or K_i values are ≤50 nM.

Example 4 5-HT₂ Functional Assay: Phosphoinositide (PI) turnover assay

25 The relative agonist activity of serotonergic compounds at the 5-HT₂ receptor can be determined in vitro using the ability of the compounds to stimulate the production of

WO 03/000036

PCT/US02/39316

[³H]inositol phosphates in [³H]myo-inositol-labeled A7r5 rat vascular smooth muscle cells by their ability to activate the enzyme phospholipase C. These cells are grown in culture plates, maintained in a humidified atmosphere of 5% CO₂ and 95% air and fed semi-weekly with Dulbecco's modified Eagle medium (DMEM) containing 4.5 g/l glucose and supplemented with 2mM glutamine, 10 µg/ml gentamicin, and 10% fetal bovine serum. For the purpose of conducting the phosphoinositide (PI) turnover experiments, the A7r5 cells are cultured in 24-well plates as previously described (Griffin *et al.* 1998). Confluent cells are exposed for 24-30 hrs to 1.5 µCi [³H]-myo-inositol (18.3 Ci/mmol) in 0.5 ml of serum-free medium. Cells are then rinsed once with DMEM/F-12 containing 10 mM LiCl prior to incubation with the test agent (or solvent as the control) in 1.0 ml of the same medium for 1 hr at 37°C, after which the medium is aspirated and 1 ml of cold 0.1 M formic acid added to stop the reaction. The chromatographic separation of [³H]-inositol phosphates ([³H]-IPs) on an AG- 1-X8 column is performed as previously described (Griffin *et al.* 1998) with sequential washes with H₂O and 50 mM ammonium formate, followed by elution of the total [³H]-IPs fraction with 1.2 M ammonium formate containing 0.1 M formic acid. The eluate (4 ml) is collected, mixed with 15 ml scintillation fluid, and the total [³H]-IPs determined by scintillation counting on a beta-counter. Concentration-response data are analyzed by the sigmoidal fit function of the Origin Scientific Graphics software (Microcal Software, Northampton, MA) to determine agonist potency (EC₅₀ value) and efficacy (E_{max}). Serotonin (5-HT) is used as a positive control (standard) agonist compound and the efficacy of test compounds is compared to that of 5-HT (set at 100%). The concentration of the compound needed to stimulate the production of [³H]-IPs by 50% of the maximum response is termed the EC₅₀ value.

WO 03/000005

PCT/US02/39316

Compounds are considered potent agonists if their EC_{50} values in this functional assay are $\leq 1 \mu M$ and are considered full agonists if their efficacy is $> 80\%$ of that of 5-HT.

The above procedures were used to generate the data shown in Table 1.

Table 1. 5-HT₂ Receptor Binding and Functional Data.

Compound	IC ₅₀ , nM	EC ₅₀ , nM	Efficacy (E _{max} , %)
(R)-DOI	0.46	277	82
Example 1	4.0	967	30

Example 5 Acute IOP Response in Lasered (Hypertensive) Eyes of Conscious Cynomolgus Monkeys

Intraocular pressure (IOP) can be determined with an Alcon Pneumatonometer after light corneal anesthesia with 0.1% proparacaine. Eyes are washed with saline after each measurement. After a baseline IOP measurement, test compound is instilled in one 30 μL aliquot to the right eyes only of nine cynomolgus monkeys. Vehicle is instilled in the right eyes of six additional animals. Subsequent IOP measurements are taken at 1, 3, and 6 hours.

Example 6 5-HT_{1A} Receptor Binding Assay

5-HT_{1A} binding studies were performed with human cloned receptors expressed in Chinese hamster ovary (CHO) cells using (³H)8-OH DPAT as the ligand. Membranes from Chinese hamster ovary cells (CHO) expressing cloned 5-HT_{1A} receptors (manufactured for NEN by Biosignal, Inc., Montreal, Canada) were homogenized in approximately 40 volumes of 50 mM Tris pH 7.4 for 5 sec. Drug dilutions were made using a Beckman Biomek 2000 robot (Beckman Instruments, Fullerton, CA). Incubations

WO 03/06

PCT/US02/39316

were conducted with membrane prep, test compounds, and 0.25 nM [3 H]8-OH-DPAT (NEN, Boston, MA) in the same buffer at 27°C for 1 h. Assays were terminated by rapid vacuum filtration over Whatman GF/B glass fiber filters pre-soaked in 0.3% polyethyleneimine. Bound radioactivity was measured using liquid scintillation spectrometry. Data were analyzed using non-linear curve fitting programs (Sharif *et al.* 1999).

Ligand binding studies can also be run using membrane preparations from calf and rat brain (local source) and human cortex membranes. Specific brain regions were dissected out, homogenized in 10 volumes of 0.32 M sucrose and centrifuged for 10 min at 700 x g. The resulting supernatant was centrifuged at 43,500 x g for 10 min and the pellet re-suspended in 50 mM Tris-HCl (pH 7.7, 25°C) using a 10 sec polytron treatment. Aliquots were stored at -140° C. To remove endogenous serotonin, the preps were incubated at 37° C for 10 min prior to the experiment. Assay incubations were terminated by rapid filtration over Whatman GF/C filters using a Brandel cell harvester. K_i values were calculated using the Cheng-Prusoff equation (De Vry *et al.* 1998).

Example 7 5-HT_{1A} Functional Assays

The function of Compounds of the present invention can be determined using a variety of methods to assess the functional activity of 5-HT_{1A} agonists. One such assay is performed using hippocampal slices from male Sprague-Dawley rats, measuring the inhibition of forskolin-stimulated adenylate cyclase (Lopez-Rodriguez *et al.* 1999; Morin *et al.* 1991; De Vry *et al.* 1998). Rat hippocampal membranes were homogenized in 25 volumes of 0.3 M sucrose containing 1mM EGTA, 5 mM EDTA, 5 mM dithiothreitol, and

WO 03/00036

PCT/US02/39316

20 mM Tris-HCl, pH 7.4 at 25°C. The homogenate was centrifuged for 10 min at 1,000 x g. The supernatant subsequently was centrifuged at 39,000 x g for 10 min. The resulting pellet was re-suspended in homogenization buffer at a protein concentration of approximately 1 mg/ml and aliquots were stored at -140°C. Prior to use, the membranes
5 were rehomogenized in a Potter-Elvehjem homogenizer. Fifty µl of the membrane suspension (50 µg protein) were added to an incubation buffer containing 100 mM NaCl, 2 mM magnesium acetate, 0.2 mM ATP, 1 mM cAMP, 0.01 mM GTP, 0.01 mM forskolin, 80 mM Tris-HCl, 5 mM creatine phosphate, 0.8 U/µl creatine phosphokinase, 0.1 mM IBMX, 1-2 µCi α-[³²P]ATP. Incubations with test compounds (10 min at 30°C) were
10 initiated by the addition of the membrane solution to the incubation mixture (prewarmed 5 min at 30°C). [³²P]cAMP was measured according to the method of Salomon (Salomon 1979). Protein was measured using the Bradford assay (Bradford 1976).

Functional activity can also be determined in recombinant human receptors
15 according to the method of Schoeffter *et al.* (1997). HeLa cells transfected with recombinant human 5-HT_{1A} receptors were grown to confluence in 24-well plates. The cells were rinsed with 1 ml of Hepes-buffered saline (in mM) NaCl 130, KCl 5.4, CaCl₂ 1.8, MgSO₄ 0.8, NaH₂PO₄ 0.9, glucose 25, Hepes 20, pH 7.4, and phenol red 5 mg/l. The cells were labelled with 6 µCi/ml of [³H] adenine (23 Ci/mmol, Amersham, Rahn AG,
20 Zurich, Switzerland) in 0.5 ml of saline at 37 °C for 2 hr. The plates were subsequently rinsed twice with 1 ml of buffered saline containing 1mM isobutylmethylxanthine. The cells were incubated for 15 min in 1 ml of this solution (37 °C) in the presence or absence of 10 µM forskolin and the test compound. The buffer was then removed and 1 ml of 5% trichloroacetic acid (TCA) containing 0.1 mM cAMP and 0.1 mM ATP was added to

WO 03/00036

PCT/US02/39316

extract the samples. After 30 min at 4°C, the TCA extracts were subjected to chromatographic separation on Dowex AG 50W-X4 and alumina columns (Salomon 1991). Cyclic AMP production was calculated as the ratio $[^3\text{H}]\text{cAMP}/([^3\text{H}]\text{cAMP} + [^3\text{H}]\text{ATP})$.

5

Table 2. 5-HT_{1A} Receptor Binding and Functional Data.

Compound	IC ₅₀ , nM	EC ₅₀ , nM	Efficacy (E _{max} %)
(R)-8-OH-DPHAT	0.52	2.6	102
Example 1	6.4	110	94

10

Example 8 Alpha-2 Adrenergic Receptor Assay Methods

Cell culture. For the alpha-2A assays, HT29 human clonic adenocarcinoma cells were grown in McCoy's 5A Medium Modified supplemented with 10% (v/v) heat-inactivated fetal bovine serum in a humidified atmosphere of 5% CO₂/95% air. Cells were sub-cultured with 0.5% Trypsin/5.3 mM EDTA in 48 wells plates with confluence being reached in approximately 4 days. Growth medium was replaced with fresh medium, 24 hours before assay of confluent cells in order to avoid the nutrient exhaustion.

20

Cyclic AMP functional assays. Confluent cultures of HT29 cells were washed twice with 0.5 ml of 15mM Hepes-buffered DMEM (DMEM/F12), then incubated with 0.5 ml DMEM/F12 containing 0.25mM 3-Isobutyl-1-methyl-xanthine (IBMX) for 20 minutes. At the end of this period the appropriate serially diluted α2-adrenergic agonists was added and the cells were further incubated for 10 minutes. Then the appropriate concentration of forskolin (for HT29 cells 4μM) was added and the cells were incubated

25

WO 01/036

PCT/US02/39316

for an additional 10 minutes. At the end of the incubation period the media was aspirated and 150 μ l of 0.1 M acetic acid, pH 3.5 was added. The plates were incubated at 40 C for 20 minutes. Then 220 μ l of 0.1 M sodium acetate, pH 11.5-12 was added. The plates were stored at -20° C. After this, a commercially available cAMP ELISA kit was used to
5 quantify the amount of cAMP generated in the receptor assay. In all these alpha-2 receptor assays, an inhibition of cAMP production reflected a receptor-mediated process.

10 Table 3. Alpha2A Receptor Binding and Functional Data.

Compound	EC ₅₀ , nM	Efficacy (E _{max} %)
Brimonidine	22	100
Example 1	110	62

All of the compositions and/or methods disclosed and claimed herein can be made and executed without undue experimentation in light of the present disclosure. While the
15 compositions and methods of this invention have been described in terms of preferred embodiments, it will be apparent to those of skill in the art that variations may be applied to the compositions and/or methods and in the steps or in the sequence of steps of the method described herein without departing from the concept, spirit and scope of the invention. More specifically, it will be apparent that certain agents which are both
20 chemically and structurally related may be substituted for the agents described herein to achieve similar results. All such substitutions and modifications apparent to those skilled in the art are deemed to be within the spirit, scope and concept of the invention as defined by the appended claims.

WO 436

PCT/US02/39316

We Claim:

1. A compound of the formula:

- 5 wherein A, B and D are independently chosen from either N or C, with the provision that at least one of A, B or D is N;

E is C or N;

R is H or C₁₋₄alkyl;

R² and R³ are independently H, C₁₋₃ alkyl, C₂₋₃ alkenyl, or R² and R³ taken together can form

- 10 a 5 or 6 member ring;

X is hydrogen, halogen, C₁₋₄alkyl, or CF₃; and

the dashed bond may be a single bond or a double bond;

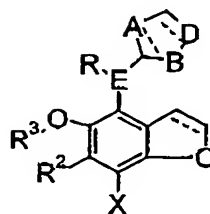

and pharmaceutically acceptable salts and solvates.

- 15 2. The compound of claim 1, wherein the compound is 2-(8-bromo-benzo-[1,2-b;4,5-b']difuran-4-yl) imidazoline hydrochloride.

3. A method for lowering intraocular pressure and providing neuroprotection comprising administering to a patient in need thereof a therapeutically effective amount of
20 a composition comprising a compound of the formula:

WO 03/000006

PCT/US02/39316

wherein A, B and D are independently chosen from either N or C, with the provision that at least one of A, B or D is N;

E is C or N;

5 R is H or C₁₋₄alkyl;

R² and R³ are independently H, C₁₋₃ alkyl, C₂₋₃ alkenyl, or R² and R³ taken together can form a 5 or 6 member ring;

X is hydrogen, halogen, C₁₋₄alkyl, or CF₃; and

the dashed bond may be a single bond or a double bond;

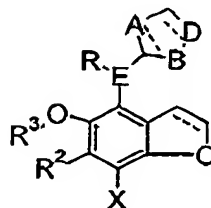

10 and pharmaceutically acceptable salts and solvates.

4. The method of claim 3, wherein the compound is 2-(8-bromo-benzo-[1,2-b;4,5-b'']difuran-4-yl) imidazoline hydrochloride.

15 5. A composition for lowering and controlling normal or elevated intraocular pressure and providing ocular neuroprotection, comprising a compound of the formula:

WO 01/36

PCT/US02/39316

wherein A, B and D are independently chosen from either N or C, with the provision that at least one of A, B or D is N;

E is C or N;

5 R is H or C₁₋₄alkyl;

R² and R³ are independently H, C₁₋₃ alkyl, C₂₋₃ alkenyl, or R² and R³ taken together can form a 5 or 6 member ring;

X is hydrogen, halogen, C₁₋₄alkyl, or CF₃; and

the dashed bond may be a single bond or a double bond;

10 and pharmaceutically acceptable salts and solvates.

6. The composition of claim 5, wherein the compound is 2-(8-bromo-benzo-[1,2-b;4,5-b'']difuran-4-yl) imidazoline hydrochloride.

15 7. The composition of claim 6, further comprising ophthalmologically acceptable preservatives.

8. The composition of claim 6, further comprising ophthalmologically acceptable surfactants.

20

WO 03/000006

PCT/US02/39316

9. The composition of claim 6, further comprising an agent to increase viscosity.

10. The composition of claim 9, wherein the agent is selected from the group
5 consisting of hydroxymethylcellulose, hydroxyethylcellulose, hydroxypropylmethylcellulose, methylcellulose, and polyvinylpyrrolidone.

11. The composition of claim 6, further comprising ophthalmologically acceptable preservatives, ophthalmologically acceptable surfactants and at least one agent
10 to increase viscosity.

12. The composition of claim 6, further defined as a topical ophthalmic suspension or solution having a pH of about 5 to about 8.

13. The composition of claim 12, wherein the concentration of the compound is
15 from .01% to 5% by weight.

14. The composition of claim 13, wherein the composition of the compound is from .25% to 2% by weight.

20

15. The composition of claim 6, further comprising at least one agent selected from the group consisting of β -blockers, prostaglandins, carbonic anhydrase inhibitors, and miotics.

WO 02/36

PCT/US02/39316

16. The composition of claim 6, further comprising at least one agent selected from the group consisting of calcium channel blockers and NMDA antagonists.

DECLARATION AND POWER OF ATTORNEY

As the below named inventor, I hereby declare that:

My residence, post office address, and citizenship are as stated below next to my name.

I believe I am the original and first inventor of the subject matter which is claimed and for which a patent is sought on the invention entitled:

**NOVEL BENZODIFURANIMIDAZOLINE AND BENZOFURANIMIDAZOLINE
DERIVATIVES AND THEIR USE FOR THE TREATMENT OF GLAUCOMA**

described and claimed in the specification identified as Attorney Docket No. 2345F USA, which is a national application under 35 U.S.C. § 371 of PCT Application Serial No. PCT/US02/39316 filed December 9, 2002, which draws priority from U.S. Provisional Application Serial No. 60/343,378 filed December 20, 2001 (the "Prior Applications") now abandoned.

The specification of Attorney Docket No. 2345F USA (check one)

- ☐ is attached hereto.
☒ was filed by an authorized person on my behalf on December 9, 2002 as
Application Serial No. PCT/US02/39316

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 37, Code of Federal Regulations, Section 1.56(a).

Pursuant to C.F.R. Section 1.56(a) I acknowledge my duty to disclose information of which I am aware material to the patentability of the subject matter of this application. I do not know and do not believe that the same was ever known or used in the United States of America before my invention thereof or patented or described in any printed publication in any country before my invention thereof, or more than one year prior to said Prior Applications, or in public use or on sale in the United States of America more than one year prior to said Prior Applications. Upon information and belief, said subject matter has not been patented or made the subject of an inventor certificate issued before the date of said Prior

Applications in any country foreign to the United States of America or on an application filed by me or my legal representatives or assigns more than twelve months prior to said Prior Applications.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

I hereby appoint Barry L. Copeland, Reg. No. 34,801; James A. Arno, Reg. No. 26,145; Gregg C. Brown, Reg. No. 30,613; Jeffrey S. Schira, Reg. No. 34,922; Patrick M. Ryan, Reg. No. 36,263; W. ATTACHMENT B

IN THE UNITED STATES PATENT OFFICE

In re: FENG ET AL.

Serial No. NYA

Filed: June 14, 2004

For: NOVEL BENZODIFURANIMIDAZOLINE AND BENZOFURANIMIDAZOLINE
DERIVATIVES AND THEIR USE FOR THE TREATMENT OF GLAUCOMA

PETITION UNDER 37 CFR 1.10

MS PCT
ATTENTION: PCT LEGAL
Commissioner for Patents
P. O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

Applicants hereby petition the Director to accord the enclosed correspondence, which consists of filing papers for a §371 patent application, a filing date of June 14, 2004.

1. Applicants' §371 patent application was mailed to the USPTO using the USPS "Express Mail Post Office to Addressee" service with sufficient postage on June 14, 2004. The USPS Express Mail item number is EV224562394US.
2. Since a filing receipt had not been received and Applicants' postcard not returned, telephone calls were made by a legal assistant in Alcon's R&D Counsel and IP Law Department to the USPCT Help Desk on or about November 9, 2004, and subsequently on or about December 7, 2004, to inquire about the status of Applicants' §371 patent application. Both telephone calls confirmed that the USPTO was not able to locate any information about Applicants' §371 patent application.
3. Nevertheless, Applicants' application papers were successfully received at the Patent Office on June 15, 2004, as evidenced by the USPS records. A true copy

of the USPS delivery information for Express Mail item number EV224562394US is attached as Ex. A; this information shows that a USPTO representative "Mary Boston" signed for Express Mail item EV224562394US on June 15, 2004 at 10:25 AM in Alexandria, Virginia.

4. Upon the advice of the PCT Help Desk, Applicants' hereby file this Petition pursuant to 37 CFR 1.10, addressed to the PCT Legal Office, and resubmit Applicants' §371 application.
5. This Petition is filed after concluding in December 2004 that Applicants' §371 patent application, which was forwarded to the USPTO on June 14, 2004 (Applicants' Docket No. 2345 US), via USPS Express Mail Air bill EV 224562394 US, was misplaced or cannot be located at the PTO.
6. Attached as Ex. B is a true copy of the USPS Express Mail mailing label EV 224562394 US. This label shows a "date-in" of Applicants' §371 patent application of June 14, 2004, and a "day of delivery" of June 15, 2004. In the upper right hand corner, this label clearly bears the circular date stamp of the USPS' Burleson, TX office with a received date of June 14, 2004.
7. Attached as Ex. C is a true copy of Alcon's Express Mail Corporate Account Mailing Statement showing that Express Mail item number EV224562394US was mailed on June 14, 2004, from Zip Code 76028 to Zip Code 22313. This Statement also shows that the postage charged to Alcon's account on June 14, 2004, for Express Mail item number EV224562394US was \$13.65.
8. Attached as Ex. D is a true copy of Alcon's internal log of Express Mail items showing that Express Mail item number EV224562394US was deposited with the USPS in Burleson, TX on June 14, 2004, at 4:56 PM. This log bears the initials "ss" which are the initials of one of the legal assistants in Alcon's R&D Counsel and IP Law Department.

9. Attached as Ex. E are true copies of the papers originally filed with USPTO on June 14, 2004, in Express Mail item number EV224562394US:

A. Transmittal Letter to the United States Designated/Elected Office (DO/EO/US) Concerning a Filing under 35 U.S.C. 371 (Form PTO-1390), two pages, in duplicate;

B. Declaration and Power of Attorney (2 pages); and

C. Return post card (not returned to Applicants) showing Express Mail No. EV224562394 US. This return post card identifies the contents of Express Mail item number EV224562394 US as: Transmittal Letter to the US Designated/Elected Office Concerning a Filing Under 35 USC 371 (2 pages, in duplicate), Declaration and Power of Attorney (2 pages), Return Post Card.

Should the Director require any additional information concerning this Petition, please contact the undersigned.

Respectfully submitted,

ALCON RESEARCH, LTD.

DECLARATION AND POWER OF ATTORNEY

As the below named inventor, I hereby declare that:

My residence, post office address, and citizenship are as stated below next to my name.

I believe I am the original and first inventor of the subject matter which is claimed and for which a patent is sought on the invention entitled:

**NOVEL BENZODIFURANIMIDAZOLINE AND BENZOFURANIMIDAZOLINE
DERIVATIVES AND THEIR USE FOR THE TREATMENT OF GLAUCOMA**

described and claimed in the specification identified as Attorney Docket No. 2345F USA, which is a national application under 35 U.S.C. § 371 of PCT Application Serial No. PCT/US02/39316 filed December 9, 2002, which draws priority from U.S. Provisional Application Serial No. 60/343,378 filed December 20, 2001 (the "Prior Applications") now abandoned.

The specification of Attorney Docket No. 2345F USA (check one)

☐ is attached hereto.

☒ was filed by an authorized person on my behalf on December 9, 2002 as
Application Serial No. PCT/US02/39316

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 37, Code of Federal Regulations, Section 1.56(a).

Pursuant to C.F.R. Section 1.56(a) I acknowledge my duty to disclose information of which I am aware material to the patentability of the subject matter of this application. I do not know and do not believe that the same was ever known or used in the United States of America before my invention thereof or patented or described in any printed publication in any country before my invention thereof, or more than one year prior to said Prior Applications, or in public use or on sale in the United States of America more than one year prior to said Prior Applications. Upon information and belief, said subject matter has not been patented or made the subject of an inventor certificate issued before the date of said Prior

Applications in any country foreign to the United States of America or on an application filed by me or my legal representatives or assigns more than twelve months prior to said Prior Applications.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

I hereby appoint **Barry L. Copeland**, Reg. No. 34,801; **James A. Arno**, Reg. No. 26,145; **Gregg C. Brown**, Reg. No. 30,613; **Jeffrey S. Schira**, Reg. No. 34,922; **Patrick M. Ryan**, Reg. DECISION

ON PETITION UNDER

37 CFR 1.10(e)

This decision is in response to applicant's "Petition Under 37 CFR 1.10," filed in the United States Patent and Trademark Office on 26 January 2005. No petition fee is required.

BACKGROUND

On 09 December 2002, applicant filed international application PCT/US02/39316, claiming a priority date of 20 December 2001. The deadline for entry into the national stage in the United States was 21 June 2004 (20 June 2004 was a Sunday).

On 26 January 2005, applicant filed a petition under 37 CFR 1.10, accompanied by a transmittal letter, a copy of an express mail label and a declaration.

DISCUSSION

37 CFR 1.10(e) states:

(e) Any person mailing correspondence addressed as set out in §1.1(a) to the Office with sufficient postage utilizing the "Express Mail Post Office to Addressee" service of the USPS but not received by the Office, may petition the Commissioner to consider such correspondence filed in the Office on the USPS deposit date, provided that:

- (1) The petition is filed promptly after the person becomes aware that the Office has no evidence of receipt of the correspondence;
- (2) The number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the original mailing by "Express Mail";
- (3) The petition includes a copy of the originally deposited paper(s) or fee(s) that constitute the correspondence showing the number of the "Express Mail" mailing label thereon, a copy of any returned postcard receipt, a copy of the "Express Mail" mailing label showing the "date-in," a copy of any other official notation by the USPS relied upon to show the date of deposit, and, if

R & D COUNSEL

Application No. 10/525,410

-2-

the requested filing date is a date other than the "date-in" on the "Express Mail" mailing label or other official notation entered by the USPS, a showing pursuant to paragraph (d)(3) of this section that the requested filing date was the date the correspondence was deposited in the "Express Mail Post Office to Addressee" service prior to the last scheduled pickup for that day; and

(4) The petition includes a statement which establishes, to the satisfaction of the Commissioner, the original deposit of the correspondence and that the copies of the correspondence, the copy of the "Express Mail" mailing label, the copy of any returned postcard receipt, and any official notation entered by the USPS are true copies of the originally mailed correspondence, original "Express Mail" mailing label, returned postcard receipt, and official notation entered by the USPS.

Items (1) and (4) have been satisfied. The petition was filed promptly. Applicant states that the papers are a true copy of the earlier submission.

As to item (2), a review of the correspondence does not reveal the Express Mail mailing label number. See MPEP 513, III. "Express Mail" Mailing Label Number. Applicant indicates that the Express Mail mailing label number was on the postcard, but the postcard does not constitute correspondence filed with the Office.

As to item (3), applicant has provided what applicant claims to have submitted, along with an Express Mail log and corporate mail account records, but the original correspondence is not marked with the Express Mail mailing label number, and is not tied to the label that applicant has provided.

CONCLUSION

For the reasons set forth above, the petition under 37 CFR 1.10(e) is DISMISSED without prejudice.

Any reconsideration on the merits of this petition must be filed within **TWO (2) MONTHS** from the mail date of this decision. Any reconsideration request should include a cover letter entitled "Renewed Petition Under 37 CFR 1.10(e)."

The application is ABANDONED.

Any further correspondence with respect to this matter should be addressed to the Mail Stop PCT, Commissioner for Patents, Office of PCT Legal Administration, P.O. Box 1450, Alexandria, Virginia 22313-1450, with the contents of the letter marked to the attention of the Office of PCT Legal Administration.
